1. Past trips
NYC TLC Uber trips from July (and BTS flight records for airport pickups)
2. TabPFN-3.5
Up to 10,000 similar trips as examples. Predicts the range of ride times
3. 2,000 mornings
Getting ready (about 15 min) plus the ride, for each possible wake-up time
4. Cutoff
Latest wake-up time with at least 90% of mornings on time
5. The alarm
Rings 30 min before the cutoff. Snoozes of up to 10 min, then it refuses
Backtest on August trips (the models never saw August): fixed buffers vs. the same alarm built on a lookup table, LightGBM and TabPFN
